

**NEW PRODUCT****aPFNOBS**

aPFNOBS, also known as OBS, is the major component of a commercially available fluorine-based surfactant (Ftergent) that has been used as an alternative to PFOS in aqueous film-forming foams (AFFFs). Since **aPFNOBS** is believed to have significant environmental persistence, bioaccumulation potential, and toxicity, its detection in wastewater is of growing concern to the environmental community. In response to customer interest, **Wellington** has expanded our line of per- and polyfluoroalkyl ether sulfonates and carboxylic acids with a certified reference standard for **aPFNOBS**.
